PERFECT ERGONOMICS

Even a BMW can be improved, adapted precisely to its rider and his requirements. For example, different sports handlebars, brake and clutch levers, rear sets as well as ride height raising and lowering kits. The TRW-Lucas rear sets for RR models are a visually and technically perfect match. They offer multiple adjustment options – with or without race shifting – and precise functionality.

FROM TRW – FOR BMW

Brake discs • Brake pads • Steel-braided lines • Clutch components
Rear sets • Handlebars • Ride height raising and lowering kits

BETTER PERFORMANCE

BMW riders appreciate the reliability and superior technology of their bikes. TRW-Lucas offers a customised range of brake components, clutches and steel-braided lines for BMW motorcycles. Whether fixed or floating brake discs, sintered or organic brake pads, wet or dry clutch, steel-braided lines for brake and clutch – the quality products from TRW-Lucas can optimise the technology and appearance of virtually any BMW. The result: brakes with superior performance, precise control and extreme durability; clutches with reliable transmission of forces and comfortable operation for any application.

CLUTCHES

In addition to the dry clutch typical for BMW, the range of clutch spare parts comprises high quality oil bath friction plate sets and the "all inclusive clutch superkit". This includes the friction plate set, the steel plates, springs and the gasket. All components are perfectly matched to each other.

Power Kit

The Power Kit is the right choice for extreme riding with high temperatures. Friction discs and steel discs are combined to ensure loss-free transmission of forces and high resistance to wear.

DISC BRAKE PADS

Whether racer, tourist, enduro or roadster – we have suitable brake pads to optimise the braking performance of current BMW models. Many test results prove TRW-Lucas sintered brake pads are usually superior to the original pads! In addition to replacing organic or sintered metal pads, top quality compounds on a carbon or sintered carbon base are available for sports riders with special requirements.

BRAKE DISCS

TRW-Lucas offers a range of different brake discs to optimise the BMW braking system. In addition to replacing fixed disc versions, the fully floating "SP" or "RAC-SP" brake discs offer best performance and service life for racing. All brake disc versions are offered with a round outer contour or with the sporty RAC design. All systems offer perfect deceleration and optimised performance.

With fixing kits

The original discs can be replaced at low cost using high quality fixings.

Firmly fixed, like the original

Those that prefer can choose the mounting version which is similar to the original discs.
